(-2,-4) , (-1,-1) (0,0) , (1,0) , (2,4)

$f(x) = 4x+2$ fonksiyonu çizelim

$y = 4x+2$ $x=0$ için $y=2$ → x eksenini $(-\frac{1}{2}, 0)$ keser

$y=0$ için $x = -\frac{1}{2}$ y eksenini $(0, 2)$

İkinci dereceden denklem

$\Delta = b^2 - 4ac$

$T.N = -\frac{b}{2a}$

$\Delta > 0$ → iki farklı reel kök

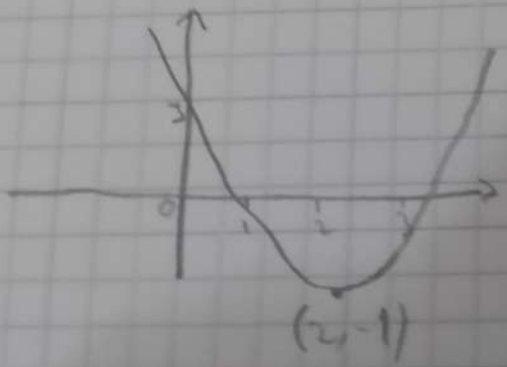

$\Delta = 0$ → denklemin tek çözümü kökü var

$\Delta < 0$ → denklemin reel kökü yok

$f(x) = x^2 - 4x + 3$ $x=0$ için $y=3$

$y=0$ için $(x-3)(x-1)$ → $x=3$, $x=1$

$T.N = -\frac{b}{2a}$ → $\frac{4}{2}$ $x=2$ $y=-1$

$(2,-1)$
